Rubik's Cube Challenge

Hands-on inquiry is motivating and fun. It can often blur the lines between play and learning. However, it can take practice to master. Not everyone will be instantly successful. We take the time to foster the right atmosphere. Practice and encourage collaboration and communication with our groups. Encourage risk taking and teach that it is OK to fail. Sometimes wrong answers can lead to the right question.

Why Afterschool?

The school year is in full swing, with numerous afterschool programs from homework to sports, crafts and music. These afterschool programs provide opportunities for young people to explore their interests and learn new skills. Afterschool programs are uniquely positioned to offer education and opportunity through hands-on, minds-on learning—without the pressures that sometimes accompany the school day. Balancing that with behaviors and social skills generally takes up the 2.5 hours daily. How can you help? Check in with your child, meet the teachers, and watch a club, or volunteer.
